Homework 7: Front-End Style-Guides

The purpose of the article is to instruct the reader to use Front-End Style-Guides when developing in UX context. Front-End Style-Guides are a modular collection of all the elements inside of the product's user Interface. Creating well-documented collections can increase the efficiency of the development team.

I consider this article great, with valuable information. One of the highest benefits of using frameworks to develop Web Sites is because these frameworks have a reliable Front-End Style-Guides that maximizes the production of the UX and their Features.
